01. PROJECT AT A GLANCE

HRMS is a modern enterprise Human Resource Management System designed to manage the complete employee lifecycle through one connected platform. It brings recruitment, onboarding, payroll, and performance into a unified HR workspace.

By centralizing employee records, HRMS ensures information flows seamlessly across attendance, leave, and payroll workflows, maintaining a single reliable source of truth.

Core Capabilities

Module	Scope
Employee Management	Centralized foundation for master employee records across all HR workflows.
Recruitment & Hiring	End-to-end talent acquisition from job posting to offer management.
Attendance & Leave	Integrated time tracking and leave management with approval workflows.
Payroll Management	Automated salary processing based on attendance and company policies.
Performance & Assets	Goal tracking, feedback cycles, and hardware allocation management.
Employee Self-Service	Mobile-friendly portal for employees to manage their personal HR activities.

Module	Scope
Manager Workspace	Dedicated hub for team-level approvals, analytics, and development.
Admin & Permissions	Multi-company configuration with granular role-based access control.

02. PROBLEM, USERS & PRODUCT VALUE

The Problem

Many organizations manage HR operations through disconnected tools and spreadsheets. This silos data, creating duplicate entry, inconsistent records, and a lack of centralized visibility into the employee lifecycle.

Target Users

- **Administrators:** Manage company configuration, system settings, and overall HRMS administration.
- **HR Staff:** Handle day-to-day operations including recruitment, onboarding, and payroll.
- **Managers:** Oversee team attendance, leave approvals, and performance reviews.

Product Value Proposition

The platform delivers value through a cohesive enterprise-wide HR strategy:

- **Operational Efficiency:** Reduces manual data entry and administrative overhead by centralizing fragmented HR workflows into one platform.
- **Scalability:** Designed to support organizational growth across multiple departments, branches, and legal company entities.
- **Data-Driven Decisions:** Provides real-time insights and organization-wide analytics to support informed HR strategy.
- **Compliance & Security:** Ensures data integrity and regulatory adherence through granular role-based access control and comprehensive audit logs.
- **Employee Experience:** Enhances engagement by providing employees with transparent, mobile-friendly access to their personal HR data and self-service tools.

03. CUSTOMER PERSONA

Primary Persona: HR Manager

Goal: Manage the organization's complete employee lifecycle and HR operations from one centralized platform.

Needs

- Complete employee information in one place.
- Automated recruitment and hiring workflows.
- Integrated attendance, leave, and payroll processing.

Pain Points

- Manual attendance and leave tracking across spreadsheets.
- Disconnected payroll and HR records leading to calculation errors.
- Limited visibility into recruitment progress and onboarding status.

04. ARCHITECTURE & TECHNOLOGY

HRMS follows an enterprise SaaS architecture designed to connect shared employee data with modular HR workflows for scalability.

Technology Stack

Layer	Technology
Frontend	React.js with Tailwind CSS
Backend	Node.js + Express.js (REST API)
Database	PostgreSQL / Relational Database
Authentication	Role-Based Authentication (RBAC)
Navigation	React Router
Architecture	Modular SaaS with shared employee records

Architecture Flow

The system maintains a secure data flow from the UI to the persistent storage layer:

05. CORE HRMS WORKFLOW

The workflow connects every stage of the employee lifecycle, ensuring that data captured during recruitment flows naturally into operational management.

Operational Lifecycle

1. **Recruitment & Hiring:** Managing job postings, applications, and evaluations.
2. **Onboarding:** Converting hired candidates into employee records with task checklists.
3. **Employee Management:** Centralizing profiles, history, and certifications.
4. **Attendance & Payroll:** Linking daily clock-ins to salary processing and payslips.
5. **Self-Service & Support:** Empowering employees via mobile-friendly tools and helpdesk tickets.

06. FEATURE MAP

Feature	Description
Employee Directory	Central listing of profiles with status, department, and manager linking.
Recruitment Pipeline	Kanban board for tracking candidates through hiring stages.
Attendance Dashboard	Real-time visibility into daily clock-ins, late arrivals, and shift status.
Leave Management	Balance tracking with policy validation and manager approval flows.
Payroll Processor	Automated earnings, deductions, and payslip generation.
Self-Service Portal	Mobile interface for profiles, leave requests, and payslip downloads.
Manager Hub	Team-specific hub for approvals, performance, and development.
Performance Goals	Tracking for OKRs, feedback cycles, and 360-degree reviews.
Asset Tracking	Management of hardware allocation and employee equipment logs.

Feature	Description
Admin Settings	Multi-company configuration, branch setup, and audit logging.

07. BUILD: DESIGN MODE

Objective: Create a premium, enterprise-grade HRMS as a unified SaaS platform for complete employee lifecycle management. The design should provide a polished, trustworthy, and workflow-driven HR experience.

Prompt 1: HRMS Product Experience

Design a premium, enterprise-grade Human Resource Management System as a single unified SaaS platform for end-to-end employee lifecycle management. The product should feel modern, scalable, and trustworthy.

Prompt 2: Executive Dashboard & Employee Management

Create the central HRMS executive dashboard and employee management experience. The dashboard should provide an immediate overview of total employees, new hires, and active employees.

Prompt 3: Recruitment, Onboarding & HR Workflows

Design the complete employee lifecycle experience starting from recruitment and continuing through onboarding. Include career website, job listings, and candidate applications.

Prompt 4: Attendance, Leave, Payroll & Self-Service

Create connected HRMS experiences for Attendance, Leave, Payroll, and Employee Self-Service. Attendance should include clock-in/out and live attendance dashboards.

08. BUILD: PROTOTYPE MODE

Objective: Convert the approved HRMS designs into a functional and responsive enterprise HR application without changing the established visual direction.

Prompt 1: Start Development From Approved Design

Convert the existing HRMS design into a functional production-ready application. Preserve the established enterprise SaaS visual system and implement using reusable components.

Prompt 2: Core HRMS Functionality

Implement Employee Management, Recruitment, Onboarding, and Payroll. Employee information must act as the central record shared across the HR workflows.

Prompt 3: Database & Role-Based Workflows

Connect the HRMS application to the backend and database. Create necessary structures for companies, employees, and roles while ensuring data isolation.

Prompt 4: Final Functional HRMS Iteration

Complete and refine the HRMS application without changing the approved visual design. Verify the complete workflow from recruitment through offboarding.

09. BUILD PROMPT HIGHLIGHTS

Design Mode Prompts

Prompt 1: HRMS Product Experience

Design a premium, enterprise-grade HRMS as a single unified SaaS platform.

Prompt 2: Executive Dashboard & Employee Management

Create the central executive dashboard with KPI cards for total employees and attendance.

Prompt 3: Recruitment, Onboarding & HR Workflows

Design the complete employee lifecycle from recruitment pipeline to digital onboarding.

Prompt 4: Attendance, Leave, Payroll & Self-Service

Create connected experiences for attendance tracking and integrated payroll logic.

Prototype Mode Prompts

Prompt 1: Start Development From Approved Design

Preserve visual fidelity while implementing the core application shell and navigation.

Prompt 2: Core HRMS Functionality

Implement realistic forms and tables for employee directory and recruitment pipelines.

Prompt 3: Database & Role-Based Workflows

Establish secure data relationships and multi-company isolation for HR records.

Prompt 4: Final Functional HRMS Iteration

Finalize the functional rollout ensuring a connected enterprise HRMS experience.

10. CORA: PLANNING & IMPLEMENTATION

CORA served as the primary implementation layer, handling architecture planning and the rollout of complex HR modules across the technology stack.

Implementation Workflow

Strategic Prompts

- **Employee Data Foundation:** Establish a master employee record as the central reference for all workflows. Ensure multi-company isolation and reference consistency for attendance, leave, and payroll modules.
- **Integrated Payroll Logic:** Connect approved attendance and leave info to payroll calculations. Implement earnings, deductions, and tax rules while protecting sensitive bank details through granular permissions.
- **Role-Based Access:** Enforce access boundaries for Admins, Managers, and Employees. Ensure Managers can only view team records while Employees access their own permitted self-service information.

11. CORA TASK ARCHIVE

Category	Implementation Focus
Employee Core	Directory, Profiles, Org Charts, and shared Master Record architecture.
Recruitment	Job listings, hiring pipelines, interview scheduling, and candidate evaluations.
Onboarding	Digital portals, task checklists, and equipment allocation tracking.
Attendance & Leave	Clock-in/out, live dashboards, policy validation, and manager approvals.
Payroll	Salary structures, payslip generation, loan repayments, and tax rules.
Permissions	RBAC boundaries, multi-company isolation, and audit logging.

12. IMPLEMENTATION MILESTONES

Phase	Milestone	Focus Area
1	Foundation	Scope definition, lifecycle mapping, and architectural setup.
2	Employee Master	Establishing the central profile structure shared across modules.
3	Recruit & Onboard	Job listing, candidate pipeline, and digital onboarding tasks.
4	Time & Pay	Attendance tracking, leave policies, and salary processing.
5	Experience Hub	Self-service portal, manager hub, and performance OKRs.
6	Final Polish	Role-based access audit, testing, and responsive UI refinement.

13. BACKEND, DATA & INTEGRATIONS

HRMS utilizes a centralized backend structure to connect employee information across domain boundaries. By organizing data into a shared PostgreSQL database, the platform ensures that a single record change in Employee Management is reflected instantly in Payroll and Performance modules.

Core Data Relationships

- **Employee → Attendance:** Records associated with work schedules to determine active work hours.
- **Employee → Payroll:** Salary inputs combined with approved leave and attendance for final calculations.
- **Employee → Performance:** Linking OKRs, feedback, and reviews directly to the unique employee ID.

Multi-Company Isolation

The system supports multi-tenant data separation, where HR data remains strictly partitioned by company. This prevents cross-tenant data exposure in environments managing multiple branches or legal entities on a single server.

14. AUTHENTICATION & USER MANAGEMENT

Role-based authentication ensures users only access the HRMS features relevant to their specific organizational responsibilities.

User Permissions Flow

1. **Authentication:** The user provides secure credentials (e.g., email/SSO) to establish their identity.
2. **Company/Tenant Selection:** The system identifies the user's authorized company context to isolate data access.
3. **Role Authorization:** The system verifies the assigned user role (e.g., Administrator, HR Staff, Manager, Employee, or Candidate).
4. **Workspace Mapping:** The system restricts navigation and feature visibility based on the verified role and permissions.
5. **Activity Logging:** Every action performed within the session is tracked in the audit log to maintain security and traceability.

Key Roles

- **Administrator:** Full control over company settings, roles, and audit logs.
- **Manager:** Restricted access to team-level workflows and approvals.
- **Employee:** Personal profile access and mobile self-service activities.

15. RESPONSIVE UI & POLISH

HRMS is built with a **Responsive First** principle, prioritizing accessibility and information clarity across all devices.

15.1 Desktop View

Features a full sticky sidebar for navigation and multi-column tables for high-density employee management.

15.2 Tablet View

Adjusted navigation and content density for touch-friendly interactions without losing dashboard depth.

15.3 Mobile View

Collapsed navigation with stacked layouts, specifically optimized for employee clock-ins and leave requests.
